Terms

ALL quotations made and prices listed herein are f. o. b. our factory, St. Louis, Mo., or delivered by our own trucks within fifteen miles of our factory. When check or cash for total price or full amount of order accompanies same, a 2% cash discount will be allowed. In all cases a deposit of 25% of total price must accompany each order. Balance must be paid upon presentation of bill of lading, or where we make delivery with our own trucks, balance is due C. O. D. Prices subject to change without notice.

Where we do the erecting, the erection cost must be added to cost of building and treated as one amount in making deposit payment of balance due.

Guarantee

We guarantee all buildings or work to be as represented. If not found to be so, you may return same to us at our expense and we will gladly refund all charges and moneys paid us, including transportation and carriage charges.

Introduction

IN order to appreciate the merits and exclusive features of our "Ready-Built" buildings and that you may fully understand our method of construction, it is necessary that you eliminate from your mind any possible impression that Miller "Ready-Built" buildings have any relation whatsoever to the "ready-cut" or "mill-work" proposition, or the so-called "take-down" forms of construction. Our buildings are all 90% "ready-built." Erection in all cases seldom exceeds 10% of the cost price.

They are as durable and substantial as man can build a frame structure, and are constructed wholly upon scientific principles.

All Miller "Ready-Built" buildings can be taken down and reset as many times as desired, without injury to any of the units. This feature leads to our buildings being confused, in some instances, with the flimsy construction of the "take-down" or "collapsible" house of temporary character. Miller buildings are stationary and permanent without sacrificing the advantage of portability, thus insuring you against loss of value or "dead" property.

Our method of construction also makes our buildings elastic. An addition can be added and at a small cost. Alterations are easily made without destroying any original parts or units. Window arrangements and also rooms may be modified. This means quite a saving, of not only money, but time.

Cost

When you buy a Miller "Ready-Built" building, you know to the cent what it is going to cost you. You have no extras to buy. You do not have to pay for waste, as in the case where hand carpentry is used. Your largest building expense is the labor or erection cost. A great part of this labor cost includes workmen's errors and re-doings; waiting for material from local lumber yards or hardware stores; the piece-by-piece method of construction in every detail; and many other little items of lesser importance, but which add to the cost, but not to the value, of the building. The Miller method eliminates all and every one of these items and reduces the erection cost to a minimum.

Structures

We can construct any style or size building for no matter what purpose you wish to use it, the "Ready-Built" way. If you have a particular style of building you are needing, we will appreciate receiving your plans on same and will gladly quote you on your particular want, the "Ready-Built" method of construction.

Material

LUMBER — All lumber used in Miller buildings is Southern Yellow Pine, unless otherwise specified. The flooring, drop siding and all finish are a "B" and better grade; all sheathing, studding, joist and sills are a good No. 1 grade. This wood is particularly recommended for use in home building, as well as any other kind of structures. It is plentiful and lower priced than any other wood of anything like its high quality. Where strength and rigidity are essential and where durability and resistance to weather and wear are the requisites, Southern Yellow Pine is most economical, because it is capable of giving a lifetime of honest service when properly cared for.

MILL WORK — Standard windows are either 12-light, 8 x 10″ glass, or 6-light, 8 x 10″ glass. Doors are 2′ 6″ x 6′ 6″, 5 cross panel, or 4-light sash doors. Other styles and sizes, however, may be had, if desired. All inside finish and trim is furnished complete.

HARDWARE — A good grade of hardware is used on all buildings. Everything furnished complete. Special designs may also be had, if specified.

INSIDE LINING OR WALL BOARD — Where wall board for the inside lining of walls and ceilings is specified, the best grade is furnished — also the necessary trim for same.

ROOFING MATERIAL — Best grades of roofing paper or shingles are also furnished. The slate-coated composition paper or shingles come in either a red or grayish-green color.

CONSTRUCTION — All parts are sectional and bolt together readily and quickly. An *interlocking batten* on our wall sections is an exclusive feature, found only in Miller "Ready-Built" buildings. Blue prints on detail of construction and specifications will be gladly furnished on request.

FOUNDATION — No foundation material is figured in any of the prices listed in this catalog. We will, however, furnish same on request and upon receipt of ground plan and grade at a nominal cost. Any kind of foundation can be used, such as brick, stone, concrete, etc. Local rock or stone about your place makes a good foundation. It is possible to have a cellar beneath any of our buildings.

FLUES AND CHIMNEYS also are not included in prices listed herein.

PAINTING — Standard finishes are as follows:

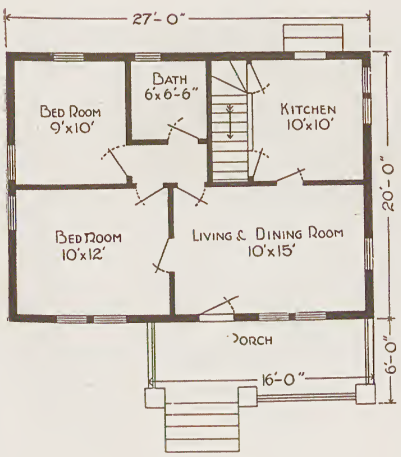
No. 1—Creosoted brown bungalow stain, white trimming.
No. 2—One coat of bronze green paint, white trimming.
No. 3—One coat of gray or all white paint.

When ordering a building, specify the kind of finish by the number, as No. 1, No. 2 or No. 3 finish.

Any other style of finish may be had, if desired.

ERECTION — We will gladly quote erected prices on any style building upon request. Prices listed herein do not include erection.

No. 1002



AN attractive, well constructed all-year-'round home. Large rooms and bath, and a good-size porch. Roof is covered with a slate-coated shingle. Many different room arrangements can be adapted to this model in order to meet your special requirements. The building comes complete with wall board and trim, and all the necessary in and outside finish.

Price, using one floor only, single wall construction .....$ 900.00
Double insulated wall construction... 1,000.00

Attic room, unlined, otherwise complete, will cost an additional $125.00.

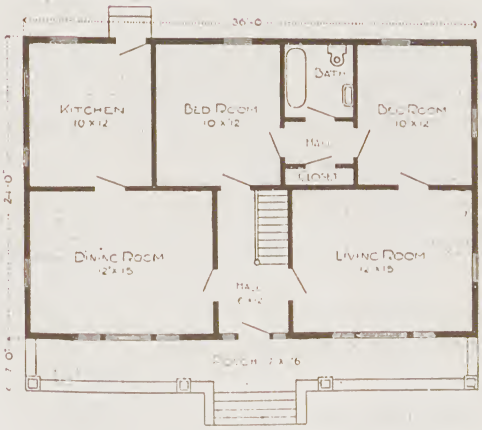
No foundation or brick material, spouting, chimneys or flues included.

Prices f. o. b. factory.

No. 1003

ANOTHER attractive all-year-'round home. Being oblong in shape, makes it possible for you to use your own room arrangement. This model has shingle roof and stucco gables. Special prices on your particular plan and size will be gladly submitted upon request. Merely send us a rough sketch, giving the number and size rooms you wish, and we will lay out and draw up plans and specifications, submitting same to you, together with our best price, without any obligation on your part whatsoever.

No. 1005



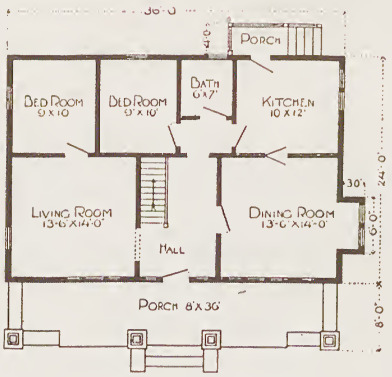
AN ideal Bungalow, specially designed for suburban sites. Five rooms, bath, hall, large closet, attic and a large, roomy porch. As in all our models, the room arrangement may be modified. A red or green slate-coated shingle roof, with building finished in a bungalow brown stain, trimmed in white, will make a very attractive and neat-looking home. Wall board and trim, casing and finish all furnished complete. No brick or concrete work, foundation material, spouting, chimneys or flues included in price.

Price, using one floor, single wall construction $1,200.00
Double insulated wall construction..... 1,325.00

With attic room finished, but unlined, there will be an additional charge of $250.00.

All prices f. o. b. factory.

No. 1008



A MODEL Bungalow of five rooms, with bath and attic, large front and a small rear porch. A red or green slate-coated shingle roof and gable. This model is otherwise finished on the same order as model No. 1005. Your own room arrangement may be adapted. Wall board and trim, and all the necessary casings and finish furnished complete.

Brick and stone work, foundation material, spouting, chimneys or flues are not included in price.

Price, using one floor single wall construction $1,350.00

Double insulated wall construction... 1,475.00

Attic room finished complete, unlined, will cost an additional $250.00.

Prices f. o. b. factory.

Model "Seibert"

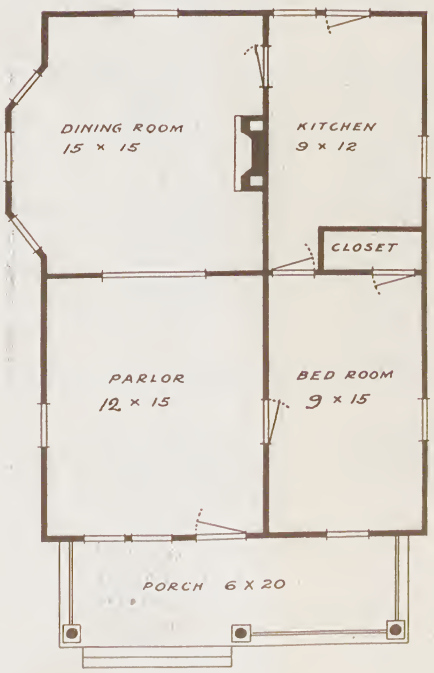
Plan No. 1—Double insulated wall construction	735.00
Plan No. 2—Single wall construction	800.00
Plan No. 2—Double insulated wall construction	900.00

Prices f. o. b. factory.

No. 1004



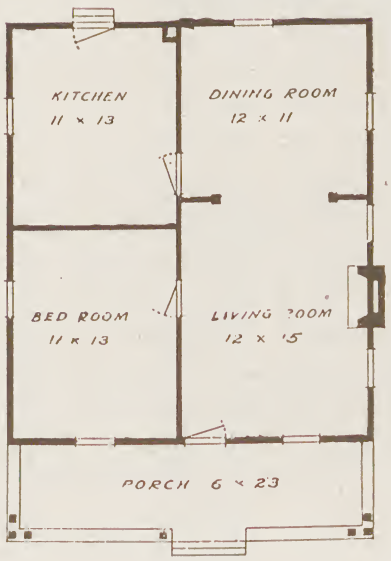
THIS model will make an ideal Country Home for all-year-'round use. Has large rooms and closet and a fine porch. Rooms may be rearranged and size changed to meet your own requirements. We wish, in all cases, to reproduce your particular idea. Roof is covered with a red or green slate-coated composition roofing paper. Wall-board and trim, casing and finish furnished complete. No foundation material, spouting, chimneys or flues included in prices.

Price, single wall construction.....$600.00
Price, double insulated wall construction 685.00

Slate-coated shingles for roof will cost an additional $50.00.

Prices f. o. b. factory.

No. 1010



A COMFORTABLE, cozy looking Country Home or Summer Cottage. Four large rooms and porch. Your own floor plan, if desired, may also be used on this model. A slate-coated composition roofing paper is furnished for the roof in either red or green. Wall board and trim, casing and finish furnished complete. No foundation material, spouting, chimneys or flues included in price.

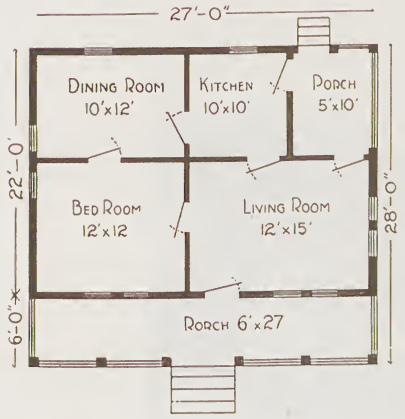
Price, single wall construction.....$575.00
Price, double insulated wall construction 650.00

Slate-coated shingles for roof, extra $50.00.
Prices f. o. b. factory.

No. 1011

AN ideal Miller "Ready-Built" Cottage. Quick to erect. Good looking, staunch and durable. Made in all sizes. Your own room arrangement can easily be adapted to this model. Roof is covered with a slate-coated composition roofing paper in either red or green. The walls are shingled. Roof can also be shingled, if desired. Simply send us a rough pencil sketch of the number, size and location of rooms and porch. State whether roof is to be covered with shingles or slate-coated composition roofing paper. If wall board and trim for inside lining of walls and ceiling is desired. We will then, without any obligation on your part whatsoever, outside of careful consideration, submit you blue prints, specifications and prices. In writing also state whether you desire the single or double wall construction.

No. 1000



A COUNTRY Cottage of neat appearance, arranged for comfort and convenience. Roof is covered with a slate-coated composition roofing paper. Wall board and trim, casing and finish furnished complete. All prices f. o. b. car St. Louis.

Miller's "Ready-Built" Garages

Six-light Window

SAVES you money on your garage and enables you to get a better looking and a better made building, at a lower figure than it would cost you to buy the same material and have same built by a carpenter. They are substantially made, permanent buildings, without sacrificing portability. They are *personal* property, and can be taken along with you wherever you may go, a feature that readily appeals to the renter, who naturally does not care to put up a garage for his landlord. Erection cost in all cases does not exceed six or seven per cent. Skilled laborers unnecessary. Everything is furnished complete, *no extras* to buy. The only tools necessary are a hammer, wrench and screwdriver. Made in all sizes from one-car capacity to twelve cars or more, and in any style or design. Our method enables you to get an exact reproduction of the garage you had long anticipated, and get it the Miller "Ready-Built" way. As all Miller garages are sectional, they can be enlarged at any time you find it necessary, by simply ordering an additional unit or two of no matter what size is needed. Any style finish listed on page 4 is optional with you.

Twelve-light Window

Panel Door

Four-light Sash Door

These cuts show the styles of windows and doors used in our garages.

No. 1015

THE Rex Garage or Tractor House is constructed of 2 x 4 No. 1 yellow pine framing, and sheathed with tongue-and-grooved No. 1 yellow pine siding, which is creosoted on the outside.

Doors are made of the same material.

The roof is also tongue-and-grooved flooring, laid on 2 x 6 rafters, cut to pitch of roof. The roof is then covered with a 2-ply ready roofing, which is put on after building is erected. We furnish this roofing, together with all hardware, such as screws, bolts, etc., required to complete the building.

The Rex is made in sections and can be erected by most any two men in two or three hours' time.

This model comes in one size only, 9′ wide by 15′ deep and 8′ high to eaves, with double doors in one end only. Each door is 4′ wide by 8′ high, making an 8′ wide by 8′ high entrance.

Building has one 24 x 28″, six-light sliding sash, which is in the back wall section, unless otherwise desired.

Price, complete, f. o. b. factory.....$65.00

No floor included.

MILLER'S Motorcycle House. Well constructed, and finished in a brown stain. Is wind and weather proof and neat in appearance. Will bolt together, ready for use, in thirty minutes. This model has a good floor, which we furnish. In fact, everything that is absolutely necessary is included.

Size is 7′ wide by 6′ deep; 4′ high in back by 6′ high in front. Roof is covered with a composition roofing paper.

A motorcycle must be garaged and cared for the same as an automobile.

Miller's "Ready-Built" School Buildings and Churches

MADE in all sizes. Well constructed, neatly and attractively finished and designed. Built for service. They are sectional or built in units, which bolt together readily, and when building is completed you have a permanent structure, yet one that can be taken down, moved and re-erected as often as is necessary, without injury to any of the parts or units.

Miller's School Buildings and Churches can also be enlarged when necessary, by simply ordering the size units you wish. This cost is exceptionally low and far below the cost of using hand carpentry and purchasing the raw material.

They can be used for temporary as well as permanent quarters. All models are furnished complete, *no extras* to buy. Any style finish listed on page 4, or any other style you desire, may be had. We will be pleased to quote you on your particular want. Will also send you blue prints, showing the detailed construction of any of our buildings, upon request.

No. 6002

MILLER'S Model No. 6002 is a specially designed "T"-shaped Church Building. An attractive, well constructed, neatly finished and substantial building. Can be had in any size, either unlined or lined with wall board, which you set in panels on walls and ceiling, and strip. The "T" shape makes it possible for you to have a private room or class room on each side of main room. This model comes furnished complete in any and all sizes. Special prices will be quoted you upon application. Merely send us in a rough pencil sketch, showing the sizes, and we will do the rest. If you wish a good, first-class building quickly, and at the right price, get our figures before purchasing.

Miller's "Ready-Built"

Hospital Buildings
Barracks Buildings
Y. M. C. A. and
Salvation Army Huts

THESE buildings can be used for all purposes, even as warehouses. Substantially built and at the same time attractive in appearance. They are made in all sizes and styles, no matter what your idea may be. As they are constructed sectionally, it is possible to enlarge same quickly, if necessary, and at a nominal cost. All intermediate sections, whether they are floor, wall or roof, and gable sections, are interchangeable, eliminating the trouble and time in looking for the next section or part when erecting. The first section that comes along will fit snugly and perfectly wherever placed.

All wall sections have our interlocking batten, a feature found only in Miller "Ready-Built" Buildings.

Our buildings are in use by the U. S. Army and Navy, the U. S. Marine and Signal Corps, the Salvation Army and the Y. M. C. A. throughout the U. S. A., France and Italy. Immediate attention is given all work of this kind.

Prices will be quoted upon request.

The Miller Manufacturing Company, St. Louis, Missouri

A panoramic view of the Koch Hospital Buildings, located at Koch, St. Louis County, Missouri. Each building is 25′ wide by 130′ long.

Front view of one of the Koch Hospital Buildings. This will give you an idea of the extensiveness and the broad field that the Miller "Ready-Built" way of construction covers.

Inside view of one of the Koch Hospital Buildings, showing the truss and wall construction. This photo was taken before building was lined with wall board.

Kindly remember, these are not "ready-cut," but 90% "ready-built" buildings.

The Miller Manufacturing Company, St. Louis, Missouri

A view of the Salvation Army Building, erected at Camp Meade, Maryland. Size of building 30′ wide by 64′ long. This type made in all sizes and can be used for all purposes.

U. S. Signal Corps Building, erected at Meramec Park, St. Louis, Missouri. Used as a comfort or club house by the boys in training.

MILLER'S Improved Scientific "Ready-Built" Sectional Fresh Air Hen Houses, Colonies and Brooder Houses. A house of perfection and the house you will want if you wish to properly care for your poultry. These houses are not merely a "ready-cut," but a 90% "Ready-Built" proposition. All sections are finished and painted. In fact, everything necessary is furnished. As our models are all sectional, enlargement, when you find it necessary, is a very simple problem. You need only order an additional unit, or whatever you desire, for the particular model you have, and you only have to pay for the parts you purchase. As your flock grows, your house can therefore grow with it. All Miller's Fresh Air Houses have embodied in them all the necessary features which go to make up a good hen house, which are—proper ventilation, prevention of drafts, abundance of fresh air, good light and sunshine, perfect dryness, simplicity, economy and durability of construction.

Ventilation

Ventilation without drafts is an absolute necessity of a good poultry house. Without it, it is difficult to have a house that is either dry or sanitary. The comfort and health of the flock depends upon good ventilation, and to obtain it, and at the same time have absolute freedom from drafts, the experienced poultrymen are all in favor of the Open Front Fresh Air Houses, of the type manufactured by us and listed on the following pages.

Prevention of Drafts

In order to prevent drafts and secure comfort and health for the flock, the Miller Open Front Fresh Air Hen Houses are made absolutely tight on three sides, by use of matched, tongue-and-grooved car siding.

Abundance of Fresh Air

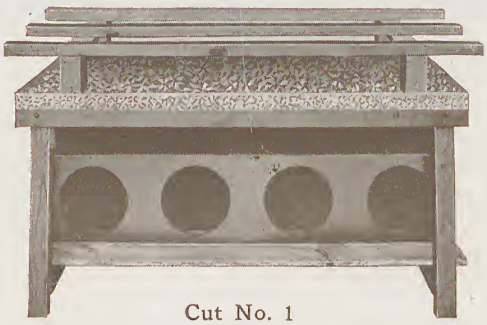
In order to have your fowls well supplied with an abundance of pure, fresh air day and night, it is necessary to adopt the open front house of the Miller type. The fresh air coming in by means of the open front, which is built very low to enable it to come in near the ground, and, being heavier than the foul, breathed air, it crowds the latter out at the upper opening in the back half of the building. This system of ventilation also avoids the fresh air entering directly under the fowls, which would have a detrimental effect on them.

Good Light and Sunshine

Sunlight and pure, fresh air are nature's best preventives of disease; destroyers of dangerous germs and promoters of health, vitality and comfort of the fowls. Sunlight and fresh air will do more towards obtaining healthy poultry, fertile, hatchable eggs and strong, sturdy chicks, than all the treatment and remedies ever invented. The fowl will never thrive in poorly lighted and damp quarters. You have only to properly try an open front fresh air house, to become convinced.

Perfect Dryness

THERE is no condition that will more surely or quickly become fatal to your egg production than dampness in the hen house, and it is also likely to cause an outbreak of disease as well. To secure a dry house, it is necessary, first of all, to secure a dry location. A gentle slope to the south, with good drainage and a porous soil, is the ideal building spot. The ground immediately surrounding the house will then drain quickly and the yard will become dry and warm. Evaporation is a cooling process, and damp yards give the hens cold and dirty feet, and cold feet will lessen your egg production. Single wall houses are cheaper than double wall houses. This, together with the fact that single walls are *drier* than double walls, is the reason why Miller's Hen Houses are all single wall.



Cut No. 1

CUT No. 1 shows Miller's 4′ roosts, table and nests. The table is covered with black iron, making it very easy to keep same clean and sanitary. The roosts can be taken up and apart in less time than it takes to tell it, making it very easy to thoroughly wash them when necessary. The bottom of the nests is part of the table. The boxing proper raises in the front, making it very easy to clean out your nests. All parts are dipped in creosote, which not only preserves the wood, but prevents lice and insects from getting into same. This 4′ roost is regular equipment with our model No. 260, and each additional unit. An 8′ roost, which has seven nests, is regular equipment with our No. 234 house or each additional unit.

CUT No. 2 illustrates a unit of a 10x16 house, making same into a 20x16, 30x16 or larger. Note the parts marked, *front post, center post, back post, front roof support* and *back roof support;* these are the parts used in making the 10 x 16 house, our model No. 234, into a 20 x 16 or longer, and are furnished with each additional unit you order. The height and depth of our hen houses will remain the same, no matter what length you make them.

Cut No. 2

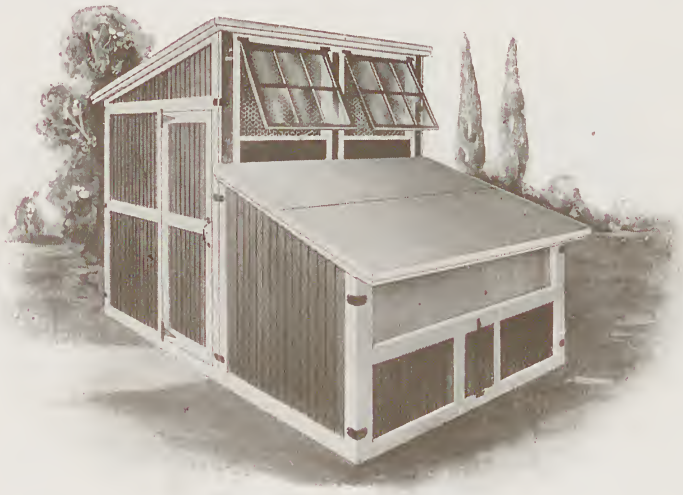
HEN HOLE AND DOOR OPEN
CORNER IRONS
EACH OPEN FRONT IS COVERED WITH ¼" MESH POULTRY NETTING

THE above illustration practically speaks for itself. You will note the scientific lines upon which this house is built. All material used throughout is tongue-and-grooved, even the sheathing for the roofs. This feature alone assures you of an absolutely air-tight and weather-proof building. The back part of our house is not partitioned off from the front or scratch pen. Some people think that these two parts should be separate. If this were done, you would have no more Fresh Air Hen House. You can, however, should you have any of our models, with the additional units added, partition each unit, enabling you to keep the young chicks, medium age and older hens separate, or even to keep the different breeds apart and at the same time have them all under one roof. There are only eleven sections which make up this house, outside of the table, roosts and nests. You can plainly see the simplicity of construction. Two men can put together any of these models in an hour's time. We do not include floors in any of our models, but same can be had at a nominal cost for either the back half or the whole part of the house. Any further detailed information that we can give you will gladly be given upon request.



Price, f. o. b. factory....$40.00

Additional units, f. o. b. factory, each 32.50

Floors extra at 10c per sq. ft.

State on which side you wish the small entrance door.

Capacity, 20 to 30 hens.

No. 260

MODEL No. 260, Open Front Fresh Air Hen House, is 6′ wide, 10′ deep, 3′ high in front, 6′ in back and 7′ to the highest point. This is an ideal house for city yards or where small flocks are kept. An additional unit can be added to this house at any time. A 4′ set of roosts and nests is furnished with this model and each additional unit. Comes finished in a bungalow brown stain with the windows and trim in white. Every necessity is included. Approximate shipping weight of the house complete, 900 lbs.

Miller's "Ready-Built" Barns

MADE in all sizes and styles. Give us the size best suited for your requirements and we will quote you our best prices. All models shown are 90% *"ready-built"* and not a *"ready-cut"* or *"mill work"* proposition. You will save time and money purchasing a Miller "Ready-Built" Barn. You have no extras to worry about. We furnish full erection instructions with all models. They are all constructed along strictly scientific principles and are as durable and substantially built as man could construct a barn of the same type. They come finished in any of the styles mentioned on page 4, or any other style you may wish. Do not fail to get our prices before purchasing.

A group of Miller "Ready-Built" Barns in use by the City of St. Louis, at Ft. Bellefontaine, Mo.

No. 1620-C

Size	
20 x 30	$300.00
20 x 40	375.00
20 x 50	450.00
25 x 30	350.00
25 x 40	430.00
25 x 50	515.00
30 x 40	500.00
30 x 50	590.00
30 x 60	690.00

MODEL No. 1620-C has a gable roof, with a Louvre ventilator in each gable. Also has a doghouse ventilator on roof. Side walls are 10′ high. Has a set of large entrance doors on each end. Prices include a sill, but no foundation posts. Roof is covered with a red or green slate-coated roofing paper. This model is furnished complete, *no extras* for you to buy. A floor may be had for this model at a nominal cost. All prices f. o. b. factory. Any other sizes than listed will be quoted upon application.

No. 1620-A

SIZE	
20 x 30	$330.00
20 x 40	412.50
20 x 50	495.00
25 x 30	385.00
25 x 40	473.00
25 x 50	566.50
30 x 40	550.00
30 x 50	649.00
30 x 60	759.00

No floor included.

MODEL No. 1620-A is constructed on the same order and has the same specifications as model No. 1620-C with the exception of the roof, which, in this model, is the frog-back style. Is finished and furnished complete, ready to erect. Prices include a sill but no foundation posts. Any other sizes than listed will be quoted upon application. All prices f. o. b. factory.

No. 1620-B

Miller's "Ready-Built" Hog Houses

A HOUSE built for service, at the same time attractive in appearance. These houses are all built along scientific lines, substantial and durable. They are not a *"ready-cut"* proposition, but a 90% *"ready-built."*

On the following pages we illustrate a few cuts taken from actual photographs of our buildings in use. It is not necessary for you to buy the stock sizes shown, as no matter what idea of a hog house you have, we can build it for you the *"ready-built"* way, which is the most economical way in the long run.

Any of our models can be lengthened at any time, by simply ordering an additional unit or two of any size you desire. This makes it possible for your house to grow as your stock increases. Give us the size, style, etc., of the house best suited for your requirements and we will quote you our best prices. Blue prints on detail of construction will also be given upon application.

Model "B"

Inside View of Model "B"

MODEL "B" Hog House is made in all sizes. This model, as you will note from floor plans, has a 4′ driveway. Good quality lumber is used throughout, and a good grade of roofing paper is also included. It is finished in a creosoted bungalow brown stain and trimmed in white. Kindly note the inside view and arrangement; clean, sanitary, plenty of light and ventilation. Free from dust and absolutely dry.

Delivered and erected prices given upon application. All prices f. o. b. factory.

THE above cut gives you the inside view of our Model "A." This house was erected by us for Mr. August A. Busch, of the Anheuser-Busch Brewery, and is located at Grant's Farm, St. Louis County, Missouri. Mr. Busch will gladly give you any information about the house you might desire. In our prices above we do not quote on wire partitions, as shown in the cut, as the market on iron and wire is very unsettled. We will, however, quote you these upon application. A sill is furnished, but no foundation posts. Floors and concrete work are also not included. We will gladly quote you on any other sizes than listed.

The Miller Manufacturing Company, St. Louis, Missouri

MILLER'S "Ready-Built" Sectional Farrowing Houses, made in two styles. Sanitary, well constructed, quickly and readily erected in a few minutes' time. Everything is furnished complete, even to the guard rail and finish. Color is creosoted brown stain, with window white. These models are all wind- and weather-proof, and are furnished with and without floors.

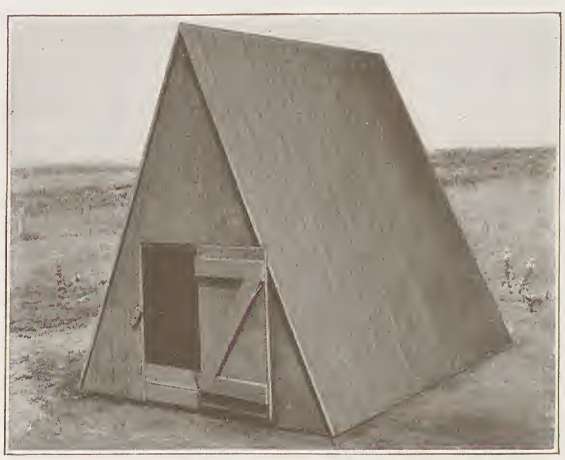
Experts, after long and much experimenting, finally agreed that the individual hog house was the best and most economical in the long run.

The roofs on these models are constructed so that they can be raised, in order to admit the sunshine and allow the house to dry out, and at the same time make it a very simple and easy task to clean out the house.

Model "H"

MODEL "H" is 7′ wide by 6′ deep, 5′ high in front, and 3′ in back. Furnished complete, ready to assemble.

Price f. o. b. factory, without the floor.....$25.00
Price f. o. b. factory, with floor..... 30.00



Model "K"

MODEL "K". "A" shaped Farrowing House, is 6′ wide and 7′ deep, and 6′ 6″ high. Is built out of tongue-and-grooved stock throughout, making a wind- and weather-proof building. The front is provided with a well hung, roomy door. Is finished in a creosoted stain, and is furnished complete with or without a floor. In this model it is unnecessary for you to have the pig fenders. Only a few minutes' time is required to assemble.

Price f. o. b. factory, without the floor $20.00
Price f. o. b. factory, with floor .. 25.00

Miller's "Ready-Built" Sectional Corn Crib

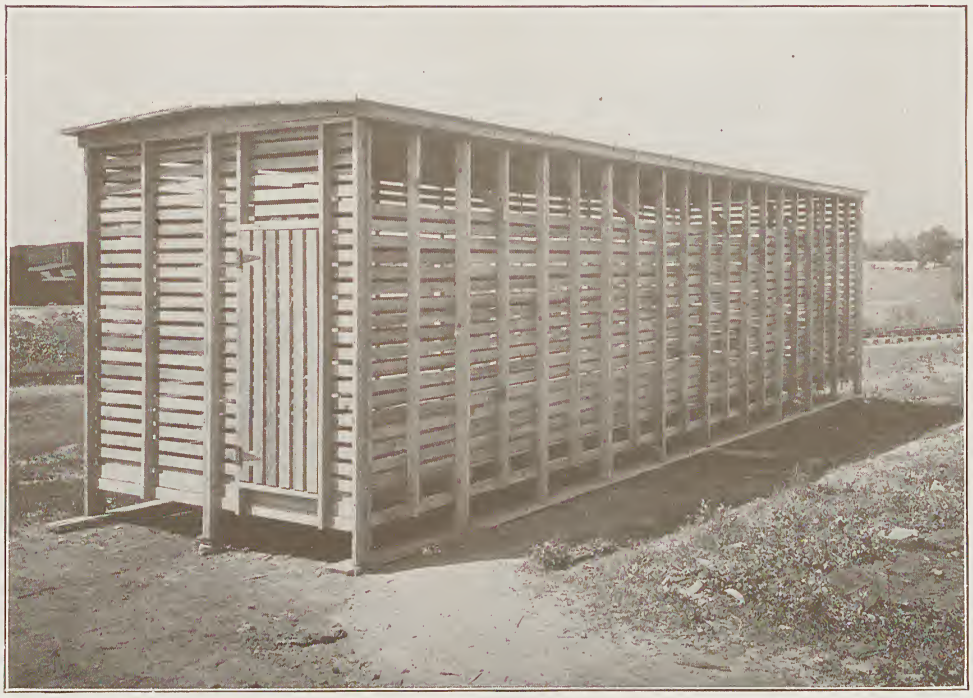
DURABLE and well constructed building throughout. Single cribs are 8′ wide by 9′ high and can be made any length you might require. They are constructed in 4′ units and it is possible for you to add additional units to your crib any time you find it necessary.

Our standard double cribs are 24′ wide and have an 8′ driveway. Construction otherwise is the same as the single. Additional 4′ units also can be had and added at any time you may find it necessary.

First-class material is used throughout and a good grade of roofing paper is also furnished. We use a coated nail throughout the building. Everything is furnished complete, ready for you to just merely bolt together. The only tools necessary are a hammer and wrench. All sections and parts of the building are thoroughly dipped in a creosoted stain, which not only preserves the wood, but makes an attractive appearance at the same time.

Do not expose your corn to rain, snow, etc., causing it to deteriorate rapidly. Cribbing your corn properly will increase its feeding value and always command a better market price.

It is oftentimes necessary to move your crib from one location to another. This is possible and easy to do if you have a Miller *"Ready-Built"* Corn Crib. We will make the crib the Miller "Ready-Built" way, according to your own designs, size, etc., should you desire it.



No. 9000

Single-Crib
Standard Width 8 Feet

Length	Price	Capacity—Corn
12 feet	$ 65.00	300 bushels
